

Sample Analysis Of Diwali Sales

Tools Used

1. Python
2. Pandas
3. Matplotlib

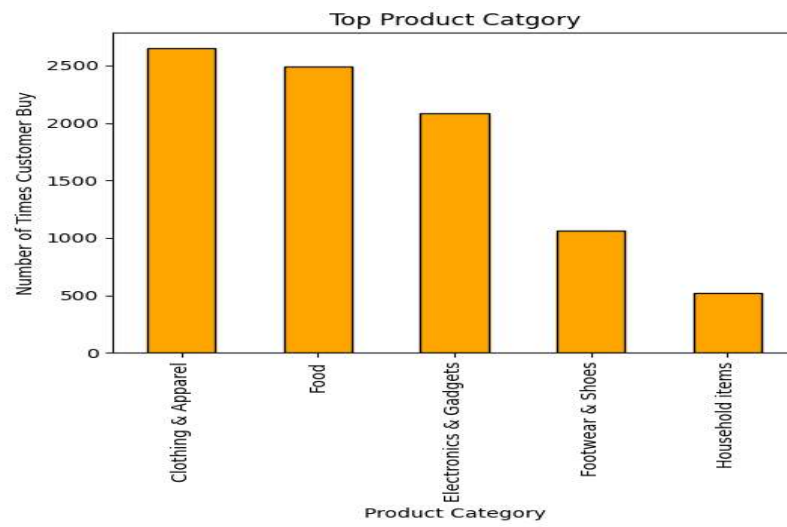

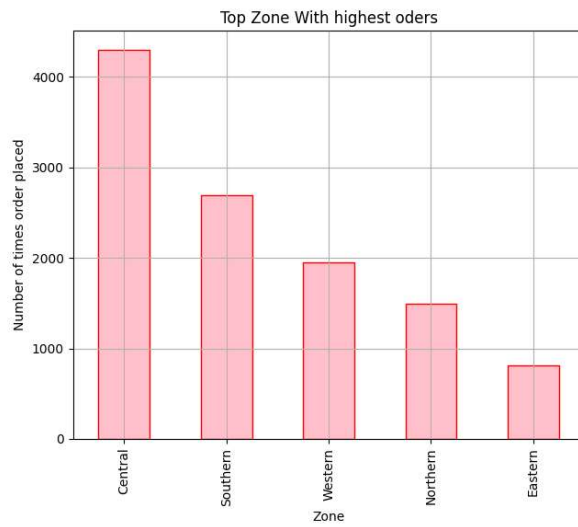

Important Results:

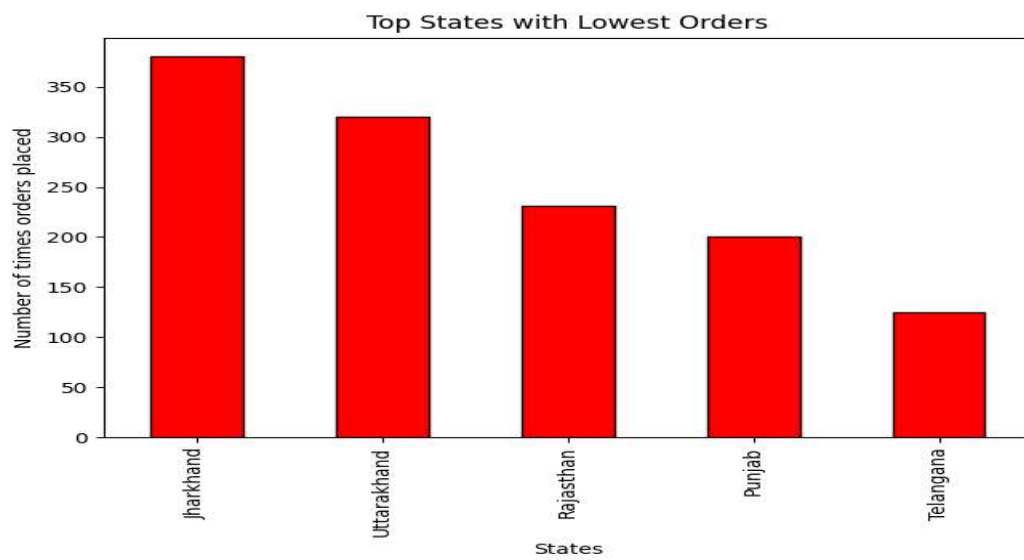

1. Total numbers of orders : 28007
2. Total sales amount : 106249132.43
3. Average number of order per customer :2.4898
4. Number of customers order more than average: 5543

Important Insights:

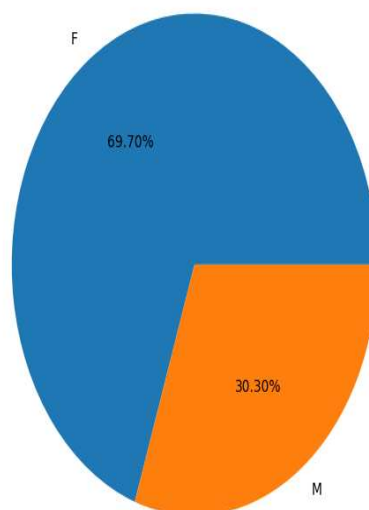

- **Female** customers placed more orders than male customers, indicating that women are the primary customer segment.
- The age group of **36–45 years** generated the highest number of orders, making it the most active customer segment.
- **Unmarried** customers placed more orders compared to married customers, suggesting higher purchasing activity among this group.
- **Uttar Pradesh** recorded the highest number of orders among all states, making it the top-performing state in terms of customer demand.
- Based on these findings, marketing campaigns and promotional strategies should focus on female customers, individuals aged 36–45, and customers in Uttar Pradesh to maximize sales and customer engagement.
